Part of Records Package / Supplement / Correction

attn Carol Halon:

I am deeply concerned over the Yucca Mtn Project and the flawed railroading process for its approval.

On Indian disputed territory it lies over an aquifer. Seismic activity is very possible there, and would likely bring radioactive material into vital drinking water.

The great distances radioactive materials would be shipped brings horrific images of what could happen to the millions of people it would be passing if a mishap occurs, accidentally or via terrorists.

Doe's preliminary site suitability evaluation is terribly premature. besides the technical problems with the repository proposal three other concerns are of great importance. No safe transportation scenario has been determined, you have not released the required Environmental Impact Statement and key regulations are yet to be finalized.

It is reprehensible to recommend Yucca Mt for a high-level nuclear waste dump when thousands of public comments on the Draft still have not been addressed. The public demands a Final Environmental Impact Statement, a detailed transportation scenario, and finalized Siting Guidelines or licensing rule. Thus the DOE lacks the basis for consideration of site suitability.

Please abandon the Yucca Mtn Project!
